BEAUTY
OF
NATURE

As 'Savaş Marble', we are taking natural stone to your projects with all its beauty. With a passion, we are supplying natural stones to you from different countries of the world. Being the leader of the market with our white marble collection, we are working hard to achieve your utmost satisfaction. With more than 200 selections and a big stock we are offering you fast and practical solutions.

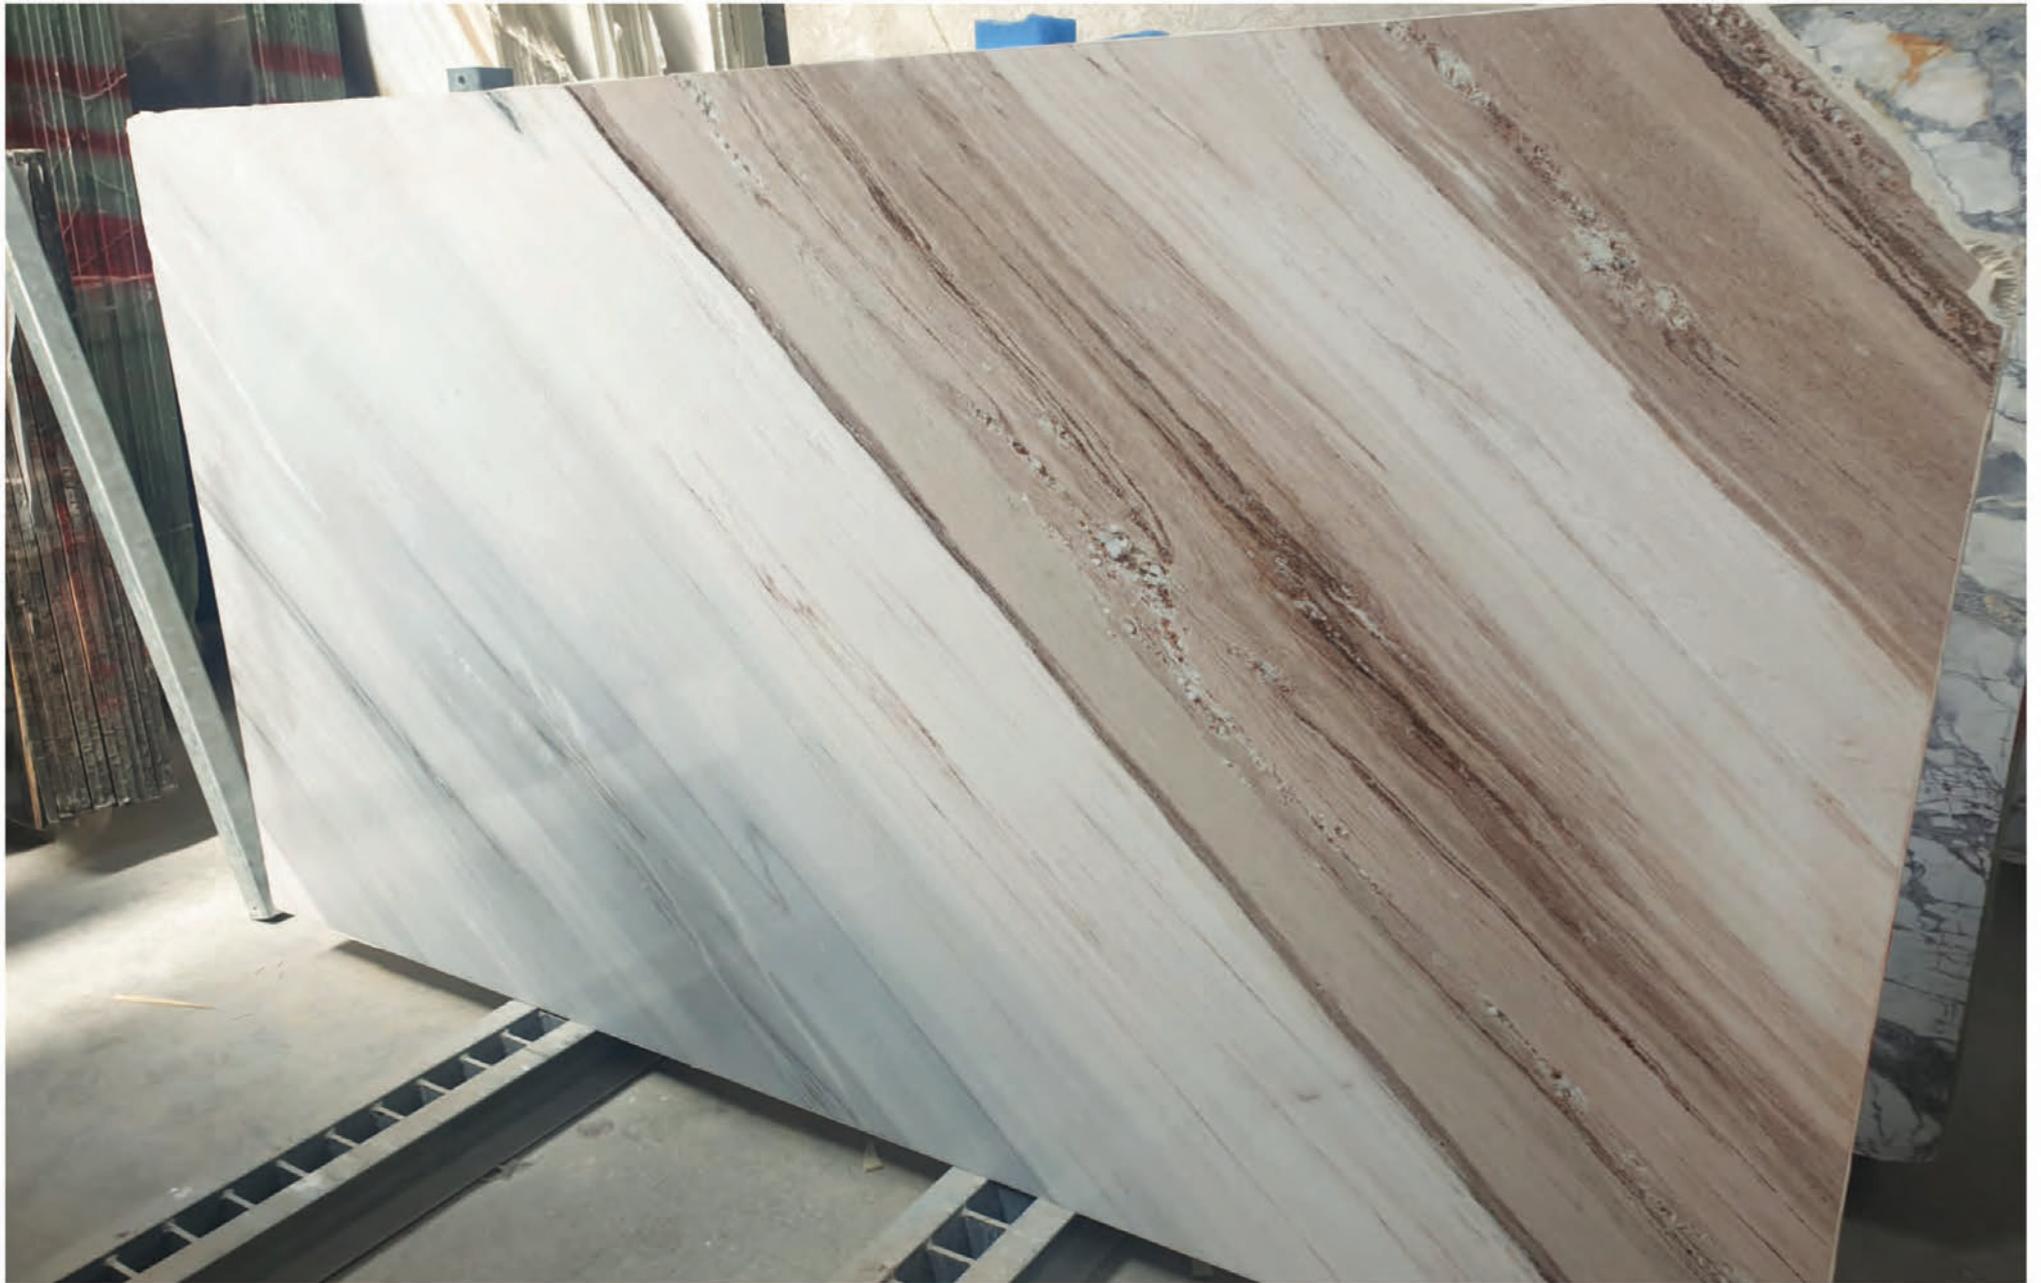

*Savaş Mermer olarak; doğal taşı, tüm güzelliğiyle mekanlarınıza taşımaktayız.
Doğal taşa olan tutkumuzla, dünyanın farklı bölgelerinden ürün tedarik etmekteyiz.
Beyaz Mermer koleksiyonu ile pazar lideri haline gelerek, projeleriniz için memnuniyetinizi
en üst seviyede tutmaya çalışmaktayız.
200'den fazla seçenek ve yüksek metrajlı hazır stokla çalışarak,
yurtiçi ve yurtdışı taleplerine hızlı ve pratik çözümler sunmaktayız.
Firmamız her geçen gün bilgi birikimini güncelleyerek, birçok uluslararası projenin çözüm ortağı haline gelmiştir.*

THE JOURNEY OF MARBLE

THE JOURNEY OF MARBLE

THE JOURNEY OF MARBLE

THE JOURNEY OF MARBLE

MERMER

Mermer, genellikle ince taneli kristallerden oluşur, orta sertliktedir. Endüstriyel anlamda, kesilip parlatılabilen her cins taş mermer olarak kabul edilmektedir. Taşın cinsi ve içeriği ne olursa olsun büyük ebatla blok elde edilebilme, kesilme ve cilalanma gibi özellikler göstermesi, o taşın mermer olarak kabul edilmesine yeterli gelmektedir.

Marble is a composition formed by the recrystallization of limestone and dolomitic limestones as a result of metamorphism. It usually consists of fine-grained crystals, of medium hardness. In the industrial sense, all kinds of stones that can be cut and polished are accepted as marble. Regardless of the type and content of the stone, the ability to obtain large blocks, cutting and polishing is sufficient for that stone to be accepted as marble.

GRANİT

Granit, aşınma direnci ve basınç dayanımı ile yüksek aşınmaya karşı çok dayanıklıdır. Çok çeşitli renkler de mevcuttur. Eskiden sadece homojen tanelerde bulunurken, şimdi damarlı ve desenli çeşitleri mevcuttur. Granit, sertliği ve her türlü hava koşullarına karşı dayanıklılığı nedeniyle mükemmel bir malzemedir ve dış bina kullanımına uygundur.

Granite is an igneous rock of volcanic origin and consists of 30% quartz and 60% feldspar, giving it a high hardness range. It is very resistant to high abrasion with its abrasion resistance and pressure resistance. A wide variety of colors are also available. In the past, it was found only in homogeneous grain, but now it is available in veined and patterned varieties. Granite is an excellent material due to its hardness and resistance to all weather conditions and is suitable for exterior building use.

TRAVERTEN

Traverten gözenekli kalkerli bir kayadır. Traverten rengi beyazdan gümüş-griye, sarı, kırmızı ve koyu kahverengiye kadar değişebilir. Çalışması kolay: yüzey honlanmış, cilalı veya eskitilmiş bir yüzey için uygundur. Esas olarak iç mekan uygulamaları için kullanılır; ancak sıcak iklimlerde dış mekanlarda da kullanılabilir.

Travertine is a porous calcareous rock. Travertine color can range from white to silver-gray, yellow, red and dark brown. Easy to work with: the surface is suitable for a honed, polished or aged surface. Mainly used for indoor applications; however, it can also be used outdoors in hot climates.

ONYX

Onyx, çok ince, sıkı taneli ve birbirine eşmerkezli olarak uzanan birçok damarı olan kalkerli bir malzemedir. Bu yarı saydam taş, lüks yaşamla eş anlamlıdır ve eşsiz yaşam alanlarını süslemek için kullanılmıştır. Muhteşem güzelliğinin bir parçası olarak yüksek cila gerektirir.

Onyx is a very fine, tightly grained, calcareous material with many veins extending concentrically to each other. This translucent stone is synonymous with luxury living and has been used to decorate unique living spaces. It requires high polish as part of its magnificent beauty.

LIMESTONE

'Taş' kelimesi döşeme boyutlu taş bağlamında kullanıldığında, genellikle limestone(kireçtaşı), arduvaz ve diğer tortul kayalara atıfta bulunur. Nadiren cilalanır. Limestone iç mekan kullanımına uygun olup, dış mekan uygulamalarında blok formda kullanılmaktadır.

When the word 'stone' is used in the context of slab-sized stone, it usually refers to limestone, slate and other sedimentary rocks. It is rarely polished. Limestone is suitable for indoor use and is used in block form in outdoor applications.

KUARSİT

Kuvarsit, granit ile aynı fiziksel-mekanik özelliklere sahiptir. Yüksek bir sertlik aralığına sahiptir ve belirli bir titre bağlı olarak genellikle granite benzer dış mekan uygulamalarında kullanılır. Kuvarsit iç mekan uygulamaları için de uygundur.

Quartzite has the same physical-mechanical properties as granite. It has a high hardness range and is often used in outdoor applications similar to granite, depending on the particular type.

Quartzite is also suitable for indoor applications.

SERPENTİN

Volkanik bir kaya olan Serpentin, granite benzer bir basınç dayanımına sahiptir. Genellikle yeşil renkte olup, açık veya koyu tonlarındadır. Bazı yerlerde gölgeler veya kırmızılık içerir. Genellikle hem dış mekan uygulamaları (belirli taşa bağlı olarak) hem de iç mekan uygulamaları için uygundur.

Serpentine, a volcanic rock, has a compressive strength similar to granite. It is usually green in color and in light or dark tones. Contains shadows or redness in some places. It is generally suitable for both outdoor applications (depending on the specific stone) and indoor applications.
